EXPERIENCE

Data Scientist

Fractal Analytics

Aug'25 - Present

Gurgaon,India

- **Tech Stack:** Python, Azure Databricks, Multivariate Forecasting
- **Client:** leading global CPG/FMCG company
- Built a multivariate demand forecasting model from scratch for the APDEO category, replacing univariate baselines and achieving MAPE under 10% across most brands.
- Own maintenance and continuous improvement of Sharecast, a multivariate forecasting system spanning APDEO, Bath Essentials, and other categories; re-engineered the pipeline to cut runtime from 8 hours (univariate) to 1.5 hour.
- Optimized end-to-end category forecast execution to run under 5 hours while maintaining full multivariate scope across all brands, enabling faster refresh cycles for business planning.

Data Scientist

Enqurious

July'23 - July'25

Bangalore,India- WFH

- Led end-to-end development of data science POCs for addressing EdTech Business needs, mentoring junior data scientists, and deploying scalable ML solutions.
- Delivered POCs spanning MMM budget optimization, dynamic pricing, insurance underwriting risk scoring, and Agentic RAG-based code generation for healthcare

Data Analyst

Enqurious

July'22 - June'23

Bangalore,India- WFH

- Conducted live sessions with clients to deliver data analysis solutions across domains using Python, SQL, and Power BI for addressing EdTech Business needs, mentoring freshers Data Professionals, Data Analysts.

Data Analyst Intern

Enqurious

April'22 - June'22

Bangalore,India- WFH

- Delivered interactive Python and MySQL sessions using hands-on projects in e-commerce and sports domains to teach data wrangling and processing techniques.

TECHNICAL SKILLS

- **ML/AI** Multivariate Forecasting, Regression, Classification, Clustering, LangChain, Agentic RAG, Hugging Face, Prompt Engineering
- **Tools:** Python, SQL, Azure Databricks, Azure ML Studio, Azure AI Foundry, MLflow, Git

EDUCATION

M.Sc. IT (Artificial Intelligence)

Maulana Abul Kalam Azad University Of Technology

2020-2022

B.Sc. (Hons.) Mathematics

Hooghly Mohsin College (Burdwan University)

2017-2020

PROJECTS

Early Behavior Shift & Retention Intelligence

- Built early behavior-shift detection system on a 1.29M-row customer × week panel; XGBoost model with SHAP explainability achieved AUC 0.984
- Engineered behavioral, engagement, and macro features to flag pre-churn signals and enable proactive retention interventions
- Published underlying synthetic dataset (10K customers, 13 relational tables) on Kaggle; built in-browser LLM assistant (Transformers.js) for dashboard Q&A

[Demo](#) [GitHub Repo](#)

Marketing Spend Optimization System

- Built end-to-end MMM system (Elastic-Net/Ridge with walk-forward cross-validation) achieving MAPE 3.1–3.4% on 130+ weeks of marketing/sales data
- Modeled geometric adstock and Hill saturation curves per channel; built SLSQP-based budget optimizer delivering +38.4% simulated lift
- Included coefficient drift monitoring and dual dashboards (Streamlit + client-side JS) for stakeholder use

[Demo](#) [GitHub Repo](#)

Retail Lending Lead Generation & Income Assessment

- Built composite Lead Priority Score combining XGBoost (income/repayment capacity) and LightGBM (loan-intent propensity) on 5,000 synthetic customer profiles
- Achieved 50.8% conversion on top-20% priority leads vs. 31.1% baseline — a 63% lift over standard targeting
- Designed cost-efficient architecture using client-side LLM inference (Transformers.js) instead of paid API calls, cutting inference cost to near-zero
